

Antique Airplane Association of Colorado

Taylorcraft Restoration Workshops

Website: www.dekle.net/AAA/members.html

Core team:

Project Manager---Bob Leyner 303-931-3867

Team members:

Jim Denly	Jack Greiner
Carol Leyner	Mike Gugeler
Georg Becker	

Since the Last Workshop:

- **The wing received the wire tensioning and twanging and further inspection and checking everything prior to covering.**
- **The Peitenpol wing and control surfaces received some finishing tapes.**

Next Workshop on 12th of February 2011:

The emphasis will be on:

- 1. Getting the first wing ready to cover (re-tension the wires in tip bay and any other items) and wrapped in Dacron. Seeing the wing on the fuselage was exciting but seeing a wing wrapped will be equally encouraging.**
- 2. Work on the toolboxes to hone metalworking skills.**
- 3. Work on the Model Airplanes and viewing the progress there.**
- 4. A short discussion on the effects of windy weather would be appropriate given the weather. The effects of windy weather start when the airplane is untied from the ground and continue throughout the flight and landing until the plane is safely secured in a hangar or tied firmly to the ground.**

We are hoping for the predicted thaw. The food will be courtesy of our rotating fleet of culinary volunteers. We hope for good attendance to continue our 2011 on a good footing-- hopefully including you!

Come, inspect and critique!
