Taylorcraft Restoration Workshops

Website: www.dekle.net/AAA/

Core team:

Project Manager---Bob Leyner 303-931-3867

Team members:

Jim Denly

Jack Greiner 303-709-6203

Carol Leyner

Mike Gugeler 720-890-0552

Georg Becker 303-652-2054

SPECIAL EVENT:

Last Workshop on 7 November:

- 1. The brackets for Co Pilot brake pedals and cable pulleys were welded in and ready for priming of the affected area.**
- 2. The rivets securing the Trailing Edges were of unknown origin and are being replaced with Cherry Q or N series rivets.**
- 3. The fitting of the tip portion of the Leading edge was attached with vigor. We may want to reevaluate the choice of parts – we may have a better fitting tip than I suggested we use.**
- 4. Work continued on jack's Pietenpol which has sprouted rudder pedals and looks less like a boat project and more like an airplane project now.**
- 5. There was a lot of parts cleaning and sorting (Thanks Steve) and Kenny led the removal of our better firewall from it's slightly used Boot Cowl. The plan is to build a new aluminum boot cowl to mate with the steel firewall.**

Next Workshop on 21 November From 10AM to about 3PM:

The emphasis will be:

- 1. Sort and box parts so we can find parts we have when we need them.**
- 2. Spray can prime the fuselage areas where Dan welded last session.**
- 3. If we can build up the cable/chains for the aileron controls they could be installed – bringing the cockpit closer to completion.**
- 4. If Mike G. arrives, the floorboards and other wood trim can proceed.**

After lunch we will set up for our very special guest speaker, Brigadier General Ritchie. Please RSVP if you plan to be there and haven't already.
